

Java Quiz 1 (v-3)

1. Write a Java program that takes a string and prints it in reverse order without using `StringBuilder.reverse()`.

Sample Input:

Input: Java Programming

Expected Output:

gnimmargorP aVaJ

2. Write a Java program that takes a string and counts the number of vowels (a, e, i, o, u) in it.

The program should be case-insensitive.

Sample Input:

Input: Java Programming

Expected Output:

Number of vowels: 5

3. Write a Java program that checks whether a given word is a palindrome or not.

Sample Input:

Input: level

Expected Output:

level is a Palindrome

4. Write a Java program that asks the user to enter the size of an integer array, then reads its elements and calculates the sum and average.

Sample Input:

Enter array size: 5

Enter elements:

10

20

15

5

30

Expected Output:

Sum: 80

Average: 16.0

5. Write a Java program that reads an integer array and finds the largest and smallest elements.

Sample Input:

Array: 15 8 23 4 19 7

Expected Output:

Largest: 23

Smallest: 4

6. Write a Java program that reads an integer array and counts the number of even and odd elements.

Sample Input:

Array: 12 7 4 9 8 15 20

Expected Output:

Even numbers: 4

Odd numbers: 3

7. Write a Java program that reads an array and a number from the user. Determine whether the number exists in the array.

If it exists, print its first index.

Sample Input:

Array: 10 25 7 30 25 18

Search number: 25

Expected Output:

Number found at index: 1

8. Write a Java program that reads an array and a number, then counts how many times the number appears.

Sample Input:

Array: 5 2 5 8 5 9 2

Number: 5

Expected Output:

5 appears 3 times

9. Write a Java program that reads an integer array and prints its elements in reverse order.

Sample Input:

Array: 10 20 30 40 50

Expected Output:

Reversed array:

50 40 30 20 10

10. Write a Java program that reads an integer array and finds the second largest distinct value.

Sample Input:

Array: 10 25 8 25 17 30

Expected Output:

Second largest: 25

11. Write a Java program that reads an integer array and prints the values without duplicates.

Sample Input:

Array: 4 2 7 2 4 9 7 1

Expected Output:

Array without duplicates:

4 2 7 9 1

12. Write a Java program that reads an integer array and moves all zeros to the end while maintaining the order of the other elements.

Sample Input:

Array: 0 5 0 3 8 0 2

Expected Output:

5 3 8 2 0 0 0
